Changes have been made to the Schneider Electric Private MIB strategy.

In the past, Schneider Electric Ethernet enabled products used a single private MIB titled "Schneider Transparent Ready PRIVATE MIB" (with a file name of TFEPrivate_Vxx.yy.MIB, where xx = major revision and yy = minor revision).

Due to continued introduction of new Ethernet enabled products, the Schneider Electric MIB is now divided into 4 files.

The Schneider MIB library now includes the following files:

- ▶ SchneiderTFE_V03_00.MIB retains the existing Schneider Private MIB objects except the switch and product descriptions, described below.
- ▶ SchneiderElectricSwitches_V01_00.MIB contains all of the switch content, (removed from the former private MIB TFEPrivateV02.01.MIB).
- ▶ SchneiderTFProducts_V01.00.MIB contains the product identification information for each product (removed from the former private MIB TFEPrivateV02.01.MIB).
- ▶ SchneiderElectricWireless_V01_00.MIB contains objects for Wireless products.

This new structure lets users select only the MIB files that are needed to support installed products.

Note: Users with existing systems, who plan to add new Schneider Electric Ethernet products, need to uninstall versions of the TFEPrivate MIB files earlier than V03.00 before installing the latest version. If the previous version of the MIB is not uninstalled, your network management tool may provide incomplete information.

Use the Schneider Electric MIB files for the following Schneider Electric devices:

MIB File Name	Required for:			
	cabled switches	wireless products	1-port SE Ethernet products	2-port SE Ethernet products
SchneiderTFE_V03_00.MIB	Yes	Yes	Yes	Yes
SchneiderElectricSwitches_V01_00.MIB	Yes	Yes	No	Yes
SchneiderElectricWireless_V01_00.MIB	No	Yes	No	No
SchneiderTFProducts_V01.00.MIB	No	No	Yes	Yes
